TACHART'S ROLE FOR SAFETY RELATED NUCLEAR ISLAND COMPONENTS

Tachart Ltd trading as Bolt & Nut Manufacturing Co. (BNM for short) manufactures qualified and specialised bolting and engineering components for critical applications. For the nuclear power sector, BNM manufactures bolting from qualified materials under the provision of it's Nuclear endorsed ISO 9001 Quality Plan.

BNM's position in the Nuclear supply chain is below that threshold requiring direct N-stamp approval. However two large & significant western European Tier 4 engineering companies have vetted BNM's quality systems according to both ASME & RCC-M standards under the provisions of their respective N-stamp and have approved BNM as manufacturers of special and qualified fasteners for their nuclear engineering projects.

BNM also manufacture lid bolts / flask bolts for the handling of nuclear waste and decommissioning.

Concerning the upcoming UK new build BNM has the following pledge:

[1] To provide genuine value for money for all qualified fasteners either on or off the nuclear Island.

[2] To provide a guaranteed delivery service with full certification and record storage.

[3] To provide a robust emergency manufacturing and delivery service, delivering qualified fasteners within 24 hours to keep construction on plan and costs minimal.
